

WALK OFF® MATS

Megahold™ Rubber Backing

The stable solution for mats on hard floors

Megahold™ rubber backing is an innovative product based on a specially developed heavy duty, soft, tacky nitrile rubber formulation.

It features unique, patented recessed suction cups that stick to the floor to minimise mat movement and is the ideal solution for public areas with high foot traffic and/or wheeled trolleys such as supermarkets, airports, exhibition & conference centres, schools & universities, hotels and large office complexes. The backing is resistant to movement – even with heavy luggage or shopping trolleys.

Megahold™ backing is the ideal answer for “problem” areas where loose-laid mats are not normally accepted.

Mat market survey (Europe 2006):

Megahold™ Backing is the answer to end-user needs

On a scale of 1 to 10 end users express a 22% gap between importance and satisfaction ratings.

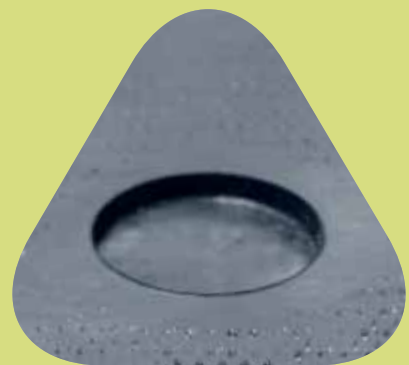

Megahold™ backing has been designed to meet end users expectations of mat stability.

Megahold™ Backing can help preventing Health & Safety issues

In high traffic public and commercial areas, the risk of trips and falls is a growing concern for companies managing these facilities.

Such injuries can have dramatic consequences for the individual and the insurance of such risks represents a significant cost to businesses.

Using Megahold™ backing on mats placed in high traffic areas is a solution to prevent the Health & Safety issues and avoid potential claims associated with this risk.

Installation of Megahold™ Mats

New mats should be washed before use. Ensure that the back of the mat is free of dirt.

Walk across the mat to activate suction cups.

Mat in use – resistant to movement.

Product Options

The Megahold™ rubber backing is available with the following textile constructions:

WOM® Original, WOM® Plus

Absorba®

Millitron® Prestige™

Cotton Plus™

Customer labelling is available on borders.
